

Bulldog TR03

Advanced Tracking

User Interface

TR03 is a server-based tracking software platform for web based real-time GPS tracking and fleet management.

With TR03 and our trackers, you can track vehicles or other objects with real-time location information.

You can view tracker's historical information. Reports and alarm information are also available for statistical analysis.

Manage sub accounts, drivers, assets and easily link data for clearer reporting and review.

Bulldog TR03

Advanced Tracking

Function Summary & Prices

Reports	Event report	Event statistics	Historical data	Speed curve
	Speed pie	Parking report	Travel report	Mileage stats
	Sensor report	Sensor average	Sensor average	Photo reporting
	User operation record	Driver IO status record	Maintenance report	Statistics report
Management	Account & Tracker	Parameter settings	Car info	RFID card
	Polygon geo-fence binding	Polygon geo-fence	Sending command	Fuel sensor
	Temperature sensor	Customize	Alarm contact	Driver info

If you have a specific reporting, management or tracking requirement, please call us on
01952 728171

Notes

- 1 Tracker dependent
- 2 Requires optional accessory
- 3 Standard upload interval = 5 minutes. 1 to 4 minute interval available for additional fee - contact us for details
- 4 All alerts are tracker dependent and may require wiring to vehicle circuits to work correctly
